Sonni was responsible for developing, implementing and externally certifying to ISO14001 the first (Global) EPCC project within BP, valued in excess of \$4Bn.

Title of Workshop Session: Assessing EMS Aspects and Impacts and establishing realistic Objectives and Targets.

Synopsis of Workshop Session: (<50 words):

A critical step for an EMS is assessing environmental aspects and impacts. This step can generate many items and it becomes difficult to evaluate and establish a “base line”. This workshop will provide guidance and supporting tools for evaluating and ranking to maximise use of resources and set achievable objectives/targets.

Please outline below in the 4 points given what benefits a delegate will derive from your session, in terms of information that they can actively use to aid their own organisation/role:

- Use “funnelling technique” for identifying aspects and impacts
- Evaluate aspects and impacts using a custom made tool (excel)
- Rank aspects and impacts in such a way that it does not overload internal resources, thereby offering realistic objectives and targets.
- Periodically review aspects and impacts and use the tools to measure and monitor progress.

Please outline any case study content of the presentation

Case study will be based upon “real-life” scenario as applied within a large multi-national organisation. The letter required assessments to be carried out across multiple sites across EMEA Region (Europe-Middle East-Africa).

What will the format and layout of your workshop session be (i.e. theatre style, cabaret, horseshoe, debate, presentation, discussion forum, question and answers?) Combination of presentation (“u” shaped) including discussions/ debates/ examples from delegates. This will be followed by a workshop which will evaluate the aspects and impacts derived during the presentation session. Final stage will be follow up

and closure. Each delegate will be able to download/take away a copy of the Excel Spreadsheet developed by Morphehs (free of charge)
